Late Quaternary Environmental Change addresses the interaction between human agency and other environmental factors in the landscapes, particularly of the temperate zone. Taking an ecological approach, the authors cover the last 20,000 years during which the climate has shifted from arctic severity to the conditions of the present interglacial environment. From the Back Cover. Late Quaternary Environmental Change : Physical and Human Perspectives. Martin Bell and Michael J. C. Walker. Second edition. The book deals largely with events over the course of the last 25, 000 years during which the climate of the mid- and high-latitude regions of the world shifted from one of arctic severity to warmer regimes of the present interglacial period.
