In interventional radiology (also called IR), doctors use medical imaging to guide minimally invasive surgical procedures that diagnose, treat, and cure many kinds of conditions. Imaging modalities used include fluoroscopy, MRI, CT, and ultrasound. At UVA Health System, these radiologists work in the department of vascular and interventional radiology. Interventional radiologists make small incisions, usually in your abdomen, and use needles and catheters to treat conditions inside your body. Interventional radiology is a medical subspecialty of radiology utilizing minimally-invasive image-guided procedures to diagnose and treat diseases in nearly every organ system. The concept behind interventional radiology is to diagnose and treat patients using the least invasive techniques currently available in order to minimize risk to the patient and improve health outcomes. These procedures have less risk, less pain and less recovery time in comparison to open surgery. Interventional radiologists treat common men's health conditions, including enlarged prostate and enlarged veins in the scrotum, through safe, nonsurgical treatments that deliver results for patients often with less risk, pain and recovery time than open surgery.
