Darsie and Ward's "Identification and Geographical Distribution of the Mosquitoes of North America, North of Mexico" has been the standard key for the Culicidae of the continental United States and Canada since 1982. They have now updated this classic work, adding 12 species previously unknown in North America.Â The identification of mosquitoes is very important in establishing the presence of vectors of a number of disease causing agents, including malaria, yellow fever, dengue, West Nile virus, and the various encephalitis forms. It is vital to have a good and up to date manual (one of the major vectors of dengue, the Asian tiger mosquito, is a fairly recent addition to our fauna!) Index of all flies and mosquito insects found across North America.Â There are a total of 66 Flies and Mosquitoes of North America in the Insect Identification database.
