This book aims to equip clinicians who perform complex gastrointestinal surgery with the knowledge and tools to identify, manage, and hopefully avoid some of the more difficult and challenging perioperative clinical scenarios. Topics include a broad spectrum of complex gastrointestinal surgery, including upper gastrointestinal (GI), hepatopancreaticobiliary, and colorectal procedures. The book benefits from a wide range of leading surgical experts who have contributed their clinical knowledge. Perioperative management consists of preoperative patient evaluation as well as intraoperative and postoperative patient monitoring and care. The operative risks are assessed prior to surgery by considering patient history, physically examining the patient, and conducting any tests deemed necessary. Preoperative adjustments are made based on the assessment findings (e.g., stopping, replacing, or temporarily administering certain drugs by another route). The specialist responsible is legally obliged to disclose all relevant information regarding the procedure to the patient. Perioperative antib
