Philosophy has been around since the dawn of western civilization. The golden age of Greek philosophy took place in Athens in the 5th century BC. The works of Socrates, Plato, and Aristotle informed thousands of years of thought, becoming central to thought in the Roman world, the Middle Ages, and then resurfacing in the renaissance and later. Starting at the height of the Roman republic, Christian thought was central to philosophy at least until the enlightenment.Â Today philosophical thought is applied to almost every component of life, from science to warfare, politics to artificial intelligence. But the philosophy of science always needs to be discussed. in relation to the history of science and the methodology of its research programs. It seeks to describe, analyse and evaluate the aims, methods and achievements of. science. Therefore, it needs to be informed about the history of scientiï-c thought. and discovery and to have a good understanding of scientiï-c research methods.Â a better understanding of science as a process of discovery and intellectual achieve- ment, such as the new Harvard approach was intended to provide, than they could. obtain by studying an ordinary i-rst-year Science subject designed for students. intending to major in science. In late 1945, Clarence E. Palmer was appointed to a senior lectureship in. Today, psychology is defined as "the scientific study of behavior and mental processes." Philosophical interest in the human mind and behavior dates back to the ancient civilizations of Egypt, Persia, Greece, China, and India. Psychology borders on various other fields including physiology, neuroscience, sociology, anthropology, as well as philosophy and other components of the humanities. The history of psychology as a scholarly study of the mind and behavior dates back to the Ancient Greeks. There
