Real World article (written from a Production point of view). The Next Generation Tribute Book Two. Blurb. Star Trek: The Next Generation continues to go where no one has gone before, rolling back the limits of the imagination to take viewers to strange new worlds, new sights and new civilizations. Through interview, articles and profiles, The Next Generation Tribute Book Two will go behind the scenes to reveal: What it is like to appear on The Next Generation. A Call to Darkness (Star Trek: The Next Generation Book 9), by Michael Jan Friedman (Author). 3.1 out of 5 stars (18).

From the universe of Star Trek: The Next Generation® ! Throughout the Star Trek: New Frontier saga, Mark McHenry, the navigator on the U.S.S. Excalibur, has demonstrated abilities beyond those of the somewhat odd human being he appears to be. When the inhabitants of an innocent solar system are confronted by a menace linked to the source of McHenry’s powers, his true heritage is revealed at last. The Next Generation is the twins book and is told from both their POVs. I love the bond that they share. It’s unique that they can sense each other’s feelings and where they are in relation to them. I definitely enjoyed The Next Generation. Both Nika and Julian are interesting characters who have their own unique personalities and views despite the unbreakable connection that they share. Because the twins are not the same gender, it’s quite comical, at times, to see how they handle one another’s issues and just how awkward such situations can be when nothing is sacred because their respective emotions infiltrate each other’s bodies and minds repeatedly. The next-generation Service Desk will offer business value through innovation. Managed services offerings that make use of autonomies and cognitive platforms will allow the Service Desk to deliver greater value by empowering users, driving productivity and growing revenues. With AI and machine-learning technology developing apace, virtual or cognitive agents will be key features of the Service Desk landscape within the next 5-10 years. In time, virtual assistants will become the main interface with which end users interact with the online world; agents will act as proxies for human staff, providing customers with personalised and human-like IT support experiences.
