I will drink several glasses when I am really thirsty but it doesn't work. The only thing that seems to help is a soda, I know this is very strange. I don't think its serious enough to go to a doctor, even if I did I couldn't anyway...Don't get on me about putting it in the wrong section, I have no idea where it is supposed to go. Answer. Save. When you're thirsty because you've been losing fluids through sweat, illness, diarrhea, etc., you're losing electrolytes in addition to water. If you are drinking only water, you are not replacing the electrolytes. Additionally, in the absorption of fluids, certain electrolytes, including sugar, will actually aide in the absorption of water in the intestinal tract. UnQuenchable Thirst of Physics, Dhaka. 179 likes. Understanding the universal physics and its Secret starts here.....!! Bermuda triangle is also known as "DEVILS triangle" the triangles position is identified in the image. it is almOST 1300000 square km. this triangle is different from other triangles for some strange happenings and incidents. here are some major strange happenings and incidents. ****1.COMPASS FAILURE: most of the pilots have said that their compass fails to work properly when, they passes through this area. *****2.NASTY WEATHER: most of the accidents took place in nasty weather, the wind blows at a great speed, this really changes into disaster. *****3.FLIGHT 15: it was a nightmare for the US army. 

'The book successfully blends personal stories with a tough look at the struggle to fight domestic food scarcity and world hunger. Those interested in these issues or global philanthropy are sure to find this a satisfying read.' Source: Publishers Weekly. 

"Mankind has always taken water for granted. For the first time, we must face a new reality: Not only is this precious resource not inexhaustible, it's already so scarce that great swaths of our planet are under serious threat. Asia's Aral Sea, once one of the largest inland bodies of water, is now a salty desert; 90 percent of California's wetlands have vanished; the once-mighty Nile, Ganges, and Colorado Rivers barely reach the sea in dry seasons." In this book, 14 prominent environmental writers address every aspect of the looming crisis. The mice kept coming back for more water. Their stomachs were already completely full of liquid, but they still wanted to drink more. They just couldn't get enough of the water which had Jean's additive in it. They didn't want to eat any food at all. Soon they died because their tiny bodies were too full of water. And, amazingly, they were still trying to reach the water when they died. Jean's son, Alain, was only eighteen months old, but he knew what he didn't like. He didn't like green vegetables. Â It was as if they had become addicted to water. They weren't interested in anything else. They didn't even want any food. This time they didn't die of too much water. They all died of hunger. 'This,' Jean thought, 'could be a problem.'
