Current guidance to UK primary care providers is ambiguous, and little is known about existing [Show full abstract] procedures for dealing with new migrants. We aimed to explore the impact of OVs on primary care services and to assess the views of health-care providers about current charging systems. Methods: We undertook a 23-point semistructured questionnaire survey of family doctors working within a high-migrant area of London. Outcome measures were the following: the impact of OVs on their practices, current procedures for registering this patient group, and doctors' concerns about A Gastroenterologist's Guide to Probiotics.
